HTML Tutorial

Page 2/10

All you need to build your first site is a computer language called **HTML**.

HTML is made of tags - there's usually an opening tag and a closing tag, with content between them.

And here's some HTML, right in this box! Let's make a change. Replace **Hello World** with a name for your site like **gizig's Website**, and click save!

You'll see the results here.

Make sure to check the green boxes below for important bonus info!

HTML

Reset   Save

```
1  <!DOCTYPE html>
2  <html>
3    <body>
4
5
6      Gizig
7
8
9    </body>
10 </html>
```

Gizig
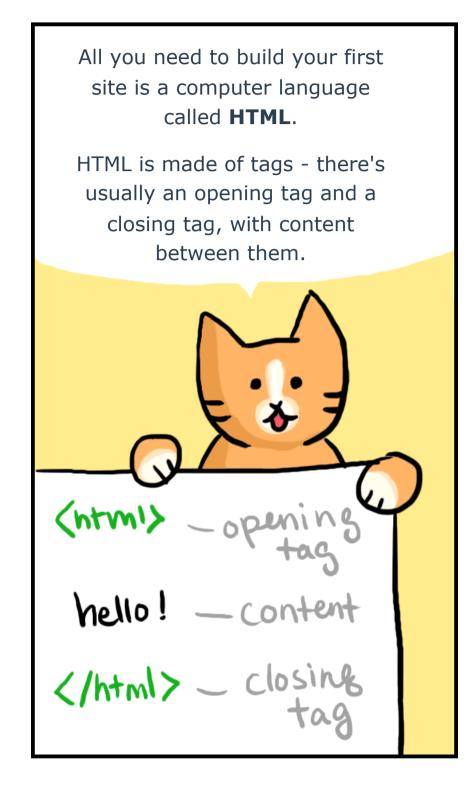

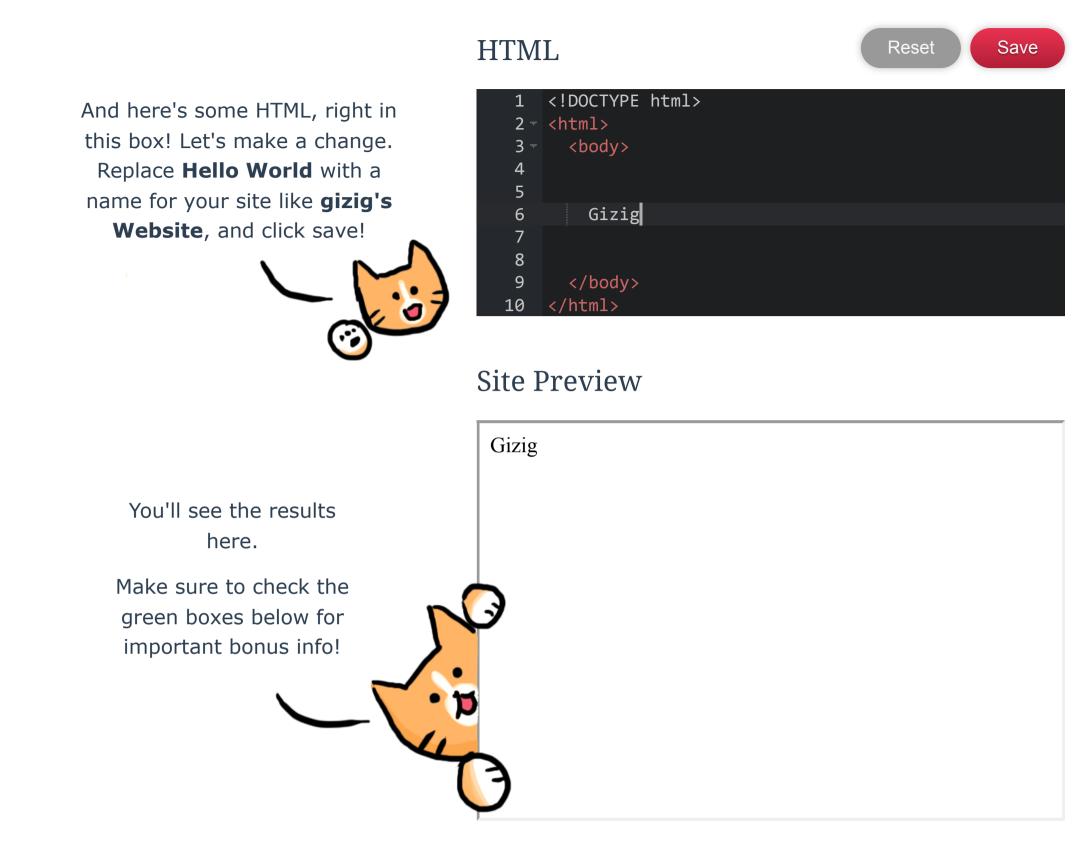

Welcome to HTML!

HTML stands for **H**yper**T**ext **M**arkup **L**anguage. Hypertext refers to text that has links, and markup refers to the tags.

Don't worry if anything seems confusing - you'll get the hang of it soon!
