

HTML Tutorial

Page 5/10

For example, a link to another site looks like this:

```
<a href="http://neocities.org">
  Check out Neocities!</a>
```

Add a link to your favorite site to the end of the paragraph, right before the </p> closing tag!

HTML

Reset

Save

```
1 <!DOCTYPE html>
2 <html>
3 <body>
4
5
6 <h1>Gizig</h1>
7 <p>Selamat Datang!</p>
8 <p>Salam jumpa dari <a href="http://gizig
  .neocities.org">Gizig</a>.</p>
9
10
11 </body>
12 </html>
```

Site Preview

Link tags

```
<a href="http://my-favorite-site.com">Click me!</a>
```

The 'a' in a link tag stands for 'anchor'.

The 'href' is short for 'hypertext reference' - it's a way to reference another hypertext document, like your favorite website!

Nesting

Tags always need to be nested properly, like Russian dolls. Note that both 'a' tags are inside the 'p' tags:

```
<p>Welcome! <a href="http://neocities.org">Link!</a></p>
```

This code is incorrectly nested:

```
<p>Welcome! <a href="http://neocities.org">Link!</p></a>
```
